

i am writing in response to the proposal of the NAB's petition 04-160, i believe that it should be rejected. i pay for my xm radio service and my first amendment rights should protect the content that i am able to receive on that service. Petitions like this would just lead to a slippery slope to other mediums of media. Where does it end? are the internet traffic and weather next? i have a right to receive this information on my satellite radio.
